

PROCESS AND INTEGRITY NOTE

I created my application portfolio for the IT Support role. I read about the job. Studied the skills and requirements that were needed. I used that information as a guide while working on my resume cover letter and other documents.

I used AI to help me sort out my thoughts make my sentences better and check for grammar mistakes.. I also reviewed and changed the work on my own. I made sure that the skills, education and experience in my portfolio were real and matched my qualifications. I did not put in any overstated information.

I also made sure not to add any personal details like my religion, birthday or other private information. I only included things that were relevant, to the job. Before I finished my portfolio I checked the grammar, spelling, layout and how it looked. I made the necessary changes to make my portfolio clear correct well-organized and professional.
